Dear Hiring Manager,

The IT Business Systems Analyst role at BAE Systems is the natural culmination of my career path. My background in Marine Corps leadership, railroad operations management, infrastructure administration at BAE, and classified systems engineering work at Raytheon was intentionally designed to build the full spectrum of skills this role requires. Although my résumé shows movement between roles, each transition was a strategic step to gain broader defense-sector experience. This position is not another step. It is the destination that brings my operational discipline, technical depth, and business analysis capabilities together.

I am seeking to return to BAE because I understand the mission-first environment and the high standards expected of the IT & Security Business Partner team. My prior work supporting classified systems at BAE, combined with my engineering experience at Raytheon and my MBA in Project Management, allows me to support long-term technology planning, cross-functional alignment, and process modernization with immediate impact.

Portfolio

CORE COMPETENCY ALIGNMENT

What BAE Needs	How I Deliver it
Translate business needs into actionable technology solutions	Served as requirements bridge between Operations, Cyber, and Engineering at Raytheon; formalized complex technical requirements into clear, scoped deliverables.
Strategic IT planning & cross-functional alignment	Developed SOPs, lifecycle processes, risk assessments, and readiness reporting supporting long-term sustainment and roadmap planning at BAE and Raytheon.
Business requirements gathering & process improvement	Led CMDB modernization efforts, SME knowledge-capture projects, and asset workflow redesigns that eliminated tribal knowledge and improved operational efficiency.
Cybersecurity compliance without business disruption	Ensured STIG/NIST compliance in closed environments while maintaining production tempo; balanced security and mission needs across stakeholders.
Effective communication with leadership	Delivered weekly operational and risk briefings at BAE; translated technical issues into business impacts to guide decision-making.
Stakeholder engagement across multiple organizations	Partnered with Operations, Engineering, Cybersecurity, vendors, and leadership to negotiate requirements, manage dependencies, and maintain alignment in classified sustainment environments.
Governance, risk, and change management discipline	Supported configuration-control boards, contributed to formal change reviews, and maintained secure baselines by documenting impacts, risks, and mitigation strategies for technology updates.

I am seeking to return to BAE because I understand the mission-first environment and the high standards expected of the IT & Security Business Partner team. My prior work supporting classified systems at BAE, combined with my engineering experience at Raytheon and my MBA in Project Management, allows me to support long-term technology planning, cross-functional alignment, and process modernization with immediate impact.

Respectfully,

Roger McNulty
